

Transferring data from Ultimate Family Tree™ (UFT) with GEDCOM and GenBridge™

This document is copyrighted © 2000, Wholly Genes, Inc.

Answers to frequently asked questions as well as the most recent version of this file can be downloaded from
<http://www.whollygenes.com/downloads.htm>

The following table itemizes the data types supported by Ultimate Family Tree v3.1 and describes the extent to which each is preserved when transferring using each of the following strategies:

Exported to GEDCOM 5.5

This column indicates whether or not UFT exports the data in question when it creates a GEDCOM 5.5 file. THE INCLUSION OF THE DATA IN THE GEDCOM FILE DOES NOT GUARANTEE THAT ANY PARTICULAR PROGRAM (OR ANY PROGRAM AT ALL) WILL IMPORT IT. Please consult the vendor of any prospective importing program for details about GEDCOM data types that are imported by that program.

UFT provides options to export to various GEDCOM formats. The "Event 1.1" format contains more types of data but to our knowledge the only program that supports that format for importing is Ultimate Family Tree. Of the remaining formats, "GEDCOM 5.5" is the most comprehensive so it is used for this comparison.

To use this strategy, run UFT and choose File > Save As and specify a file type of "GEDCOM". Specify an export file name (*.GED) and on the Options screen specify a GEDCOM format of "Family 5.5". Then run the destination software and import the GEDCOM file that was created.

Transferred to TMG v4.0a using GenBridge

This column indicates whether or not the UFT data can be transferred directly to The Master Genealogist (TMG) v4.0a or later using its exclusive data conversion engine, GenBridge™. The same issues and answers are relevant to users transferring from UFT's predecessors (Roots IV, Roots V, Visual Roots, and Family Gathering) to the extent that those programs support the same data types.

To use this strategy, run TMG and choose File > Import from > Ultimate Family Tree. The original UFT data file will not be affected. Any unusual circumstances or problems related to the import will be itemized in the errata file (.LST) which is displayed at the end of the import process.

As the author of this report, Wholly Genes Software (the makers of The Master Genealogist) acknowledges the potential for bias in its preparation. We believe, however, that it fairly and accurately represents the facts. We encourage you to submit corrections or suggestions to tmg@whollygenes.com

Notes about the comparison chart:

- GEDCOM: Where noted, the exported GEDCOM file contains the UFT codes for bold, underline, italics, private text, footnote, citation, name index and place index - but for those data items it uses UFT codes (e.g., [UL:][:UL]) which are not supported by GEDCOM or recognized by importing programs.
TMG: imports and translates these codes to TMG equivalents.
- GEDCOM: exports the structured date. Does not import the freeform date.
TMG: imports the structured date or the freeform date according to a user option.
- GEDCOM: exports the short place or the long place, according to a user option. Does not export the medium place.
TMG: imports two of the three (short, medium, long) according to a user option.
- GEDCOM: place modifier is not exported.
TMG: the place modifier is attached to the first non-empty field unless it is "in" or equal to the short place modifier in which case it is ignored because "in" is TMG's default.
- GEDCOM: exports those sources from the Source Library that are linked to the exported data (whether or not the links are exported). Does not export other sources from the Source Library.
TMG: imports all sources in the Source Library. [See also Note # 7 below](#)
- REVENT libraries are not linked to specific UFT projects and are therefore not exported by GEDCOM or imported to TMG.
Third-party utilities may make it possible to convert REVENT libraries to TMG or other programs.
- TMG imports the entire Source, Place, and Multimedia libraries from UFT. However, once the import to TMG is complete, you can optionally purge these tables of unlinked records by creating a new TMG data set using the "List of People" report (Secondary Output tab) and selecting "All People" as the focus. The new data set will include only those sources, places, and multimedia exhibits that are actually linked to people.

\$20 OFF TMG FOR UFT USERS

For a limited time, The Master Genealogist Gold Edition v4.0c is available for \$79.00, or \$20.00 OFF the retail price of \$99.00, plus shipping/handling when purchased directly from Wholly Genes Software. For complete details or to place an order, see

<http://www.whollygenes.com>
